

SEPTEMBER 2026 · 43 PRODUCTS

Government AI Navigator

Independent map for state and local leaders

Three lenses every government leader needs before investing in AI:
readiness, impact, and lock-in.

01

Can I buy it,
and what does it do?

02

What will it take,
and what will I get?

03

Am I getting
locked in?

Buyer-side. No vendor money.

Caliber is Avero methodology — beta, not sold or licensed, not a dot on the map.

INSIDE THIS EDITION

How to read the three lenses · scoring notes, placement rationale, and procurement questions

Full directory of 43 products · Caliber methodology rail (not a vendor SKU)

File: Avero_Start-at-Zero_Government-AI-Navigator_Sep2026.pdf

Interactive map: govai.averoadvisors.com

HOW TO USE THIS REPORT

A buyer's map, not a vendor catalog

This September 2026 edition of the Government AI Navigator is the printable companion to the interactive map at govai.averoadvisors.com. It is written for state, local, and education leaders who are being sold “AI” faster than procurement, records, and policy can absorb it. Avero sits on the buyer's side. No vendor paid for placement. Caliber is Avero methodology — not a product on the map.

The live site plots **43 products** across three lenses. This PDF adds what the scatter cannot hold: scoring notes, placement rationale, and procurement questions for every product, plus an honest Caliber methodology section (beta, not sold or licensed).

What's inside

- How to read the three lenses — the same axes as the interactive map.
- What's new in this edition — 11 net-new products and the OpenAI split.
- Product directory — scoring notes, rationale, and questions, grouped by category.
- Caliber — how Avero scores engagements, and what it is not.
- Before you buy — Phase Zero, from Start at Zero.

How to read a score

Each axis is 0–100. They are Avero's independent September 2026 placements, not benchmarks, not lab tests, and not a substitute for your own due diligence. A product in “Government-ready leaders” can still be the wrong buy for your estate. A product in “Emerging bets” can still be the right narrow tool. Use the questions.

THE THREE LENSES

How to read the map

Every product is placed on three independent 2x2s. Clicking a dot on the website pins the same notes printed here. Caliber is not on any scatter — it is the rail Avero uses to score work, described later in this report.

Can I buy it, and what does it do?

Readiness × Capability · X: StateRAMP/FedRAMP where publicly documented, cooperative vehicles, SLED references. Y: Narrow point solution → broad platform.

Quadrant	Meaning
High potential, high risk	Powerful, procurement still hard for SLED
Government-ready leaders	Strong capability and a path to buy
Emerging bets	Early, thin SLED track record
Safe but limited	Easy to buy, narrow use

What will it take, and what will I get?

Complexity × Impact · X: Plug-and-play → deep integration and change management. Y: Staff efficiency → resident or student outcomes.

Quadrant	Meaning
Quick wins	High impact, faster to stand up
Strategic transformers	High impact, major investment
Easy adds	Simple deploy, incremental value
Heavy lifts	Hard to implement, limited payoff

Am I getting locked in?

Independence × Maturity · X: Proprietary / hard to leave → portable data and alternatives. Y: Emerging → established at SLED scale.

Quadrant	Meaning
Established but locked	Proven, expensive to unwind
Open and proven	Mature with a realistic exit
Risky bets	New and proprietary
Flexible but unproven	Open, thin SLED history

Compliance claims in this edition

FedRAMP, GovRAMP, StateRAMP, IL5, and cooperative-vehicle language in this PDF is copied from the live site product notes (public pages as of this edition). We do not invent additional authorizations. Cooperative purchase is not FedRAMP. "Progressing" is not authorized. Confirm the SKU, cloud, and boundary on the vendor's current public page and your own authorizing official's review before you buy.

SEPTEMBER 2026

What's new in this edition

The interactive map already shows September 2026 / 43 products, with Caliber as a methodology rail rather than a vendor dot. This report matches that inventory.

Relabels and splits (existing products, not dropped)

OpenAI split. ChatGPT Enterprise (FedRAMP Moderate SaaS, FR2533155773) is separate from ChatGPT Gov (customer-hosted on Azure / Azure Government — the High / IL5 / CJIS path is the agency ATO, not OpenAI-managed High SaaS). **Google Gemini** is relabeled Gemini for Government. **Salesforce GovCloud** notes include Agentforce; IL5 on Missionforce National Security (5 Aug 2026) is a national-security path, not treated as a SLED FedRAMP claim. **Darwin AI** readiness is raised on Carahsoft + NASPO/TIPS/OMNIA (Apr 2026) — still not a FedRAMP claim.

Net-new on the scatter

Perplexity Enterprise for Government · GenAI/LLM

FedRAMP Certified 20x Class B (Low) as of 1 Feb 2026 (FR2604643715). GSA MAS / OneGov pricing is federal-first. SLED path exists via MAS piggyback in some states; not a SLED-native product.

Axon Draft One · Public Safety AI

Sold into existing Axon Evidence/BWC estates. 2026 local adoptions (e.g. Pittsburg CA, Prescott AZ, Kenosha WI, Alamosa CO). No FedRAMP claim used here. Easiest where Axon is already on the belt.

Flock Safety · Public Safety AI

ALPR/cameras widely bought by cities via OMNIA/Region 4 ESC cooperative R250203 (public 2026 council packets). Do not treat cooperative buy as FedRAMP. Privacy and data-sharing fights are part of the SLED story (Madison-area non-renewals, 2026).

Civic Marketplace · Procurement AI

Free for SLED entities. NIGP Business Council member. 24 Aug 2026: MCP connectors into Claude, ChatGPT, and Copilot announced at NIGP Forum.

Ellucian AI · Higher-ed AI

Ellucian Student launched as an AI-native SIS+HCM+Finance platform for higher ed (2026 product line). Dominant campus SIS vendor; buy is usually an existing Ellucian relationship, not a net-new SLED RFP. FERPA-oriented responsible-AI pages; no FedRAMP claim used here.

UiPath Automation Cloud Public Sector · RPA/Automation

FedRAMP Certified Moderate (Class C) as of 20 Mar 2024 (FR2132958724). UiPath docs: public-sector SaaS with FIPS 140-2, U.S.-person ops. April 2026 public-sector release notes add GenAI Activities via Integration Service. Some Insights features remain outside the authorization until review completes.

Appian Government Cloud · Low-code

Appian Government Cloud — High: FedRAMP Certified Class D (High) as of 3 Apr 2025 (FR2318051429). Appian also states a 3-year DoD IL5 PA. AI skills inherit the GovCloud boundary; model pick is constrained on GovCloud inference profiles.

Zoom AI Companion · Collaboration

Verified gov path: Zoom announced FedRAMP JAB Moderate authorization for AI Companion on Zoom for Government (16 Sep 2024). Zoom for Government also cites FedRAMP Moderate, DoD IL4, and StateRAMP on the platform. For paid Zoom Gov accounts, including state/local. Commercial AI Companion is a different stack — buy the Gov SKU.

Palantir AIP · AI Platform

Palantir stated Dec 2024 that FedRAMP High for Palantir Federal Cloud Service covers the product suite including AIP. Federal-first. SLED references exist but are thinner than Tyler/Esri — treat as high-capability, procurement-heavy for most cities.

CodeComply · Gov Platform

AI plan review / pre-check for local permitting. Official plan-review layer for CivicPlus; also sits beside Accela/Tyler/OpenGov per vendor materials. TXShare cooperative endorsement. No FedRAMP claim used here.

Laserfiche AI · Records/ECM

Conditional add: deep SLED records/ECM install. Laserfiche AI (including AI Agents, Apr 2026) uses OpenAI models per Laserfiche trust pages. Enterprise Security (6 Aug 2026) is on the GovRAMP Progressing list — not GovRAMP Ready/Authorized as of this edition. Do not treat progressing as authorized.

Caliber is not new-as-a-product

Caliber remains Avero's scoring rail. It is not one of the 43. It is not plotted. See the methodology section. Agencies get the benefit by engaging Avero; there is no SKU and no cooperative contract.

DIRECTORY

43 products — scoring notes, rationale, questions

Grouped in the same order as the live map. “New this edition” matches the chips on govai.averoadvisors.com. Mini-plots below match the three website lenses; the gold dot is this product.

GENAI/COPILOT

GenAI/Copilot

2 products in this edition.

Microsoft Copilot

GENAI/COPILOT

Readiness × Capability

Government-ready leaders

Government readiness

Complexity × Impact

Quick wins

Implementation complexity

Independence × Maturity

Established but locked

Vendor independence

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	86	88
Complexity × Impact	Quick wins	36	74
Independence × Maturity	Established but locked	20	90

Placement rationale

Copilot is a government-ready leader on buyability: GCC / GCC High paths and a dominant M365 estate put it far to the right, with deep capability. Impact is not a quick win — agents raise the ceiling only if grounding, records, and change management are in place. Independence is established-but-locked: leaving M365 after Copilot is the switching-cost story.

Scoring notes

Readiness × capability

M365 Copilot is GA in GCC, GCC High, and DoD. Microsoft documents Researcher/Analyst agents plus Agent Builder in government clouds; Copilot Studio publishing to Teams/M365 is listed for GCC. GCC High Copilot is built to FedRAMP High-oriented controls. Dominant SLED M365 install base.

Complexity × impact

Lands inside existing M365. Agents raise the ceiling; value still depends on data hygiene, grounding policy, and change management.

Independence × maturity

Deep M365 lock-in. Extremely mature in government productivity stacks.

Procurement questions

- Which Microsoft cloud is this tenant actually in (commercial, GCC, GCC High), and is Copilot licensed in that same cloud?
- Are Researcher/Analyst agents and Agent Builder in the authorized GCC/GCC High feature list you are buying, or only in commercial?
- Who owns grounding data, prompt logs, and retention — and do they meet your records schedule?
- What is the exit plan if you later constrain Copilot to a subset of agencies or roles?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Gemini for Government

GENAI/COPILOT

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	80	80
Complexity x Impact	Quick wins	38	66
Independence x Maturity	Established but locked	34	72

Placement rationale

A government-ready leader where Workspace is already the system of work, with slightly less SLED gravity than Microsoft. Impact still depends on training and policy. Independence is Workspace-dependent and still catching Microsoft in most SLED offices.

Scoring notes

Readiness x capability

Relabeled from Google Gemini. Gemini for Government is listed FedRAMP Certified on the FedRAMP AI page (early 2026). Workspace path for agencies already on Google.

Complexity x impact

Useful where Workspace is the system of work; training and policy work still required.

Independence x maturity

Workspace dependency. Growing public-sector presence, still behind Microsoft in most SLED offices.

Procurement questions

- Is the agency already on Google Workspace, or is this a net-new productivity stack?
- Which Gemini for Government SKU is listed as FedRAMP Certified on the current FedRAMP AI page — and does your use stay inside that boundary?
- How will you handle records and e-discovery for Gemini output versus current Workspace logs?
- What is the migration cost if most of the workforce still lives in Microsoft 365?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

GENAI/LLM

GenAI/LLM

4 products in this edition.

Anthropic Claude

GENAI/LLM

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	78	80
Complexity × Impact	Easy adds	28	48
Independence × Maturity	Open and proven	74	64

Placement rationale

Claude sits with government-ready leaders on capability, with a clearer High path (Claude for Government) and a typical SLED path (Enterprise) that Anthropic itself distinguishes. Impact is API-or-chat rather than ERP-class. Multicloud options improve independence versus Azure-only stacks; SLED references still lag federal.

Scoring notes

Readiness × capability

Claude for Government (C4G) is Anthropic’s FedRAMP High standalone product. Anthropic states most state/local uses fit Claude Enterprise; C4G is the High path. Also on Bedrock GovCloud and Vertex Assured Workloads.

Complexity × impact

API-first or standalone chat. Easier than an ERP; still needs use-case design and records policy.

Independence × maturity

Multicloud options reduce single-cloud lock-in versus Azure-only stacks. SLED references still catching up to federal.

Procurement questions

- Do you need Claude for Government (FedRAMP High standalone) or Claude Enterprise for typical state/local use, as Anthropic itself distinguishes?
- If you go through Bedrock GovCloud or Vertex Assured Workloads, which model IDs sit inside the authorized boundary?
- Where will prompts and outputs be stored, and who can export them?
- What happens to applications if you later switch foundation models?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

ChatGPT Enterprise (FedRAMP Moderate)

GENAI/LLM

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	72	80
Complexity × Impact	Easy adds	22	42
Independence × Maturity	Open and proven	54	58

Placement rationale

This is the OpenAI-managed Moderate SaaS — FedRAMP Certified 20x Moderate as of 9 Jan 2026 (FR2533155773) in the live notes. It is not ChatGPT Gov and is not High. Impact is fast knowledge work on a restricted feature slice. Independence is a SaaS lock to OpenAI’s gov endpoint; commercial Enterprise workspaces do not convert in place.

Scoring notes

Readiness × capability

OpenAI-managed SaaS. ChatGPT Enterprise and API Platform: FedRAMP Certified 20x Moderate as of 9 Jan 2026 (FR2533155773). This is not ChatGPT Gov and is not FedRAMP High. Carahsoft is a public-sector reseller. SLED still confirming local vehicles.

Complexity × impact

Fastest OpenAI path for knowledge work and drafting. Feature set is a FedRAMP-restricted slice of commercial Enterprise.

Independence × maturity

SaaS lock to OpenAI’s gov endpoint (gov.api.openai.com for API). Existing commercial Enterprise workspaces do not convert in place.

Procurement questions

- Confirm you are buying the OpenAI-managed FedRAMP Moderate SaaS (FR2533155773) — not ChatGPT Gov and not FedRAMP High.
- Will existing commercial Enterprise workspaces convert, or must you stand up a new gov tenant (OpenAI states they do not convert in place)?
- Is Carahsoft (or another reseller) on an existing cooperative, or is this a new vehicle?
- Which features are in the FedRAMP-restricted slice versus commercial Enterprise?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

ChatGPT Gov

GENAI/LLM

Lens	Placement	X	Y
Readiness × Capability	High potential, high risk	46	80
Complexity × Impact	Strategic transformers	58	50
Independence × Maturity	Risky bets	36	48

Placement rationale

ChatGPT Gov is the customer-hosted path (Azure commercial or Azure Government + Azure OpenAI). The August “High only via Azure” line described this path, not the Moderate SaaS. Readiness is lower because you own the ATO and ops. Impact complexity is the agency cloud. Independence carries Azure gravity.

Scoring notes

- Readiness × capability**
Customer-hosted ChatGPT frontend on the agency’s Azure commercial or Azure Government + Azure OpenAI. OpenAI’s public page: this is how agencies pursue IL5 / CJIS / FedRAMP High on their own ATO — it is not OpenAI-managed High SaaS. The August “High only via Azure” line described this path, not the Moderate SaaS.
- Complexity × impact**
Same Enterprise-class chat, more IT and authorization work. Complexity is the agency cloud, not the prompt window.
- Independence × maturity**
Azure gravity. You own the container and the ATO; you also own the ops.

Procurement questions

- Who owns the Azure subscription, ATO, and ongoing ops — this is customer-hosted, not OpenAI-managed High SaaS?
 - Are you targeting Azure commercial or Azure Government, and which controls (IL5 / CJIS / FedRAMP High) are you actually pursuing?
 - How does this path compare in cost and calendar to ChatGPT Enterprise Moderate SaaS?
 - What is the records and identity model inside your Azure tenant?
- Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Perplexity Enterprise for Government

GENAI/LLM · NEW THIS EDITION

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	58	56
Complexity × Impact	Easy adds	20	44
Independence × Maturity	Flexible but unproven	58	36

Placement rationale

FedRAMP Certified 20x Class B (Low) as of 1 Feb 2026 (FR2604643715) — Low, not Moderate or High. GSA MAS / OneGov is federal-first; SLED is a piggyback story in some states. Impact is cited research with a low implementation lift. Treat as a flexible but still thin SLED research layer, not a workflow platform.

Scoring notes

Readiness × capability

FedRAMP Certified 20x Class B (Low) as of 1 Feb 2026 (FR2604643715). GSA MAS / OneGov pricing is federal-first. SLED path exists via MAS piggyback in some states; not a SLED-native product.

Complexity × impact

Cited research and drafting. Low implementation lift; limited workflow depth.

Independence × maturity

Multi-model research layer. Federal-first maturity; SLED references still thin.

Procurement questions

- FedRAMP Certified 20x Class B (Low) as of 1 Feb 2026 (FR2604643715) — is Low sufficient for the data you will paste into it?
- Is your SLED path a GSA MAS piggyback, or do you lack a local vehicle?
- What sources does it cite, and can you disable web browse for sensitive drafting?
- What data is retained, and can you export conversation history?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

AI PLATFORM

AI Platform

2 products in this edition.

AWS Bedrock

AI PLATFORM

Readiness × Capability

Government-ready leaders

Government readiness

Complexity × Impact

Strategic transformers

Implementation complexity

Independence × Maturity

Open and proven

Vendor independence

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	80	74
Complexity × Impact	Strategic transformers	56	62
Independence × Maturity	Open and proven	56	76

Placement rationale

Bedrock is a government-ready platform pattern — multi-model access rather than a chatbot SKU. Confirm each model's authorization boundary; it is not a blanket High. Impact tracks whatever the agency actually ships. Multi-model choice is the point; AWS gravity and glue-code rewrite cost are the lock-in.

Scoring notes

Readiness × capability

GovCloud / FedRAMP High path for several foundation models (Claude, others as listed in AWS gov docs). Common SLED pattern: multi-model access rather than a single chatbot SKU. Confirm each model's authorization boundary — Bedrock is not a blanket High for every model.

Complexity × impact

Flexible, developer-heavy. Impact tracks whatever the agency actually ships.

Independence × maturity

Multi-model choice is the point; AWS gravity is still real. Exit means rewriting glue.

Procurement questions

- Which foundation models are inside your GovCloud / FedRAMP High boundary — Bedrock is not a blanket High for every model?
- Who writes and owns the glue (agents, RAG, IAM), and what is the rewrite cost to leave AWS?
- How will you inventory which models staff actually invoke?
- What logging lands in CloudTrail versus the model provider?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor's current public page before you buy.

Palantir AIP

AI PLATFORM · NEW THIS EDITION

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	52	86
Complexity x Impact	Strategic transformers	84	80
Independence x Maturity	Established but locked	18	58

Placement rationale

Palantir stated Dec 2024 that FedRAMP High for Palantir Federal Cloud Service covers the suite including AIP. Federal-first; SLED references thinner than Tyler/Esri. High capability, procurement-heavy for most cities. Ontology lock-in is the independence story — plan the exit before the ontology becomes the city.

Scoring notes

Readiness x capability

Palantir stated Dec 2024 that FedRAMP High for Palantir Federal Cloud Service covers the product suite including AIP. Federal-first. SLED references exist but are thinner than Tyler/Esri — treat as high-capability, procurement-heavy for most cities.

Complexity x impact

Ontology + operators on messy operational data. High ceiling, high integration and change-management cost.

Independence x maturity

Deep Palantir lock-in (Foundry/AIP/Gotham). Plan the exit before the ontology becomes the city.

Procurement questions

- Palantir stated Dec 2024 that FedRAMP High for Palantir Federal Cloud Service covers the suite including AIP. That is federal-first. What is the SLED vehicle and reference?
- Ontology lock-in: what is the exit before the ontology becomes the city?
- Who operates AIP day to day — Palantir, a partner, or city staff?
- What is integration and change-management cost versus a narrower tool?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

WORKFLOW/ITSM

Workflow/ITSM

1 product in this edition.

ServiceNow Gov

WORKFLOW/ITSM

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	80	76
Complexity x Impact	Strategic transformers	62	76
Independence x Maturity	Established but locked	28	82

Placement rationale

Avero places ServiceNow Gov in “Government-ready leaders” on readiness x capability, “Strategic transformers” on complexity x impact, and “Established but locked” on independence x maturity. Platform lock-in. Very established in large gov IT shops.

Scoring notes

Readiness x capability

Long federal presence; OneGov GSA commercial terms. State/local via existing Now Platform customers and partners.

Complexity x impact

High operational impact if you redesign workflow, not if you bolt a chatbot on ITSM.

Independence x maturity

Platform lock-in. Very established in large gov IT shops.

Procurement questions

- Are you buying AI on an existing Now Platform estate, or a greenfield ITSM replacement?
- Which OneGov / partner terms apply to the AI SKUs versus the platform?
- Will you redesign workflow, or bolt a chatbot onto unchanged tickets?
- What is the five-year exit and data-export plan from the Now Platform?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

CRM/PLATFORM

CRM/Platform

1 product in this edition.

Salesforce GovCloud

CRM/PLATFORM

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	78	76
Complexity x Impact	Strategic transformers	68	76
Independence x Maturity	Established but locked	24	80

Placement rationale

Strong where CRM is already Salesforce. Agentforce IL5 on Missionforce National Security (5 Aug 2026) is a national-security path in the live notes — not a SLED FedRAMP claim. Impact is citizen casework plus agents, not a chat widget. CRM + agent ecosystem lock-in is the independence story.

Scoring notes

Readiness x capability

GovCloud plus Missionforce. Agentforce (Agentforce 360 / Agentforce Public Sector) is the AI-agent layer: Salesforce announced IL5 authorization on Missionforce National Security (5 Aug 2026) — that is a national-security path, not a SLED FedRAMP claim. Strongest where CRM is already Salesforce.

Complexity x impact

Citizen case management plus agents. Implementations are not light; Agentforce value is workflow, not a chat widget.

Independence x maturity

CRM + agent ecosystem lock-in. Long government history.

Procurement questions

- Is Agentforce in the GovCloud org you actually run, or only on Missionforce National Security (IL5 announced 5 Aug 2026 — not a SLED FedRAMP claim)?
- Are you already a Salesforce CRM shop, or is this a platform conversion?
- Who owns agent actions that write back to cases — audit trail, human approval, records?
- What is the cost to unwind CRM + agent ecosystem later?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

GOV ERP

Gov ERP

2 products in this edition.

Tyler Technologies

GOV ERP

Readiness x Capability

Government-ready leaders

Government readiness

Complexity x Impact

Strategic transformers

Implementation complexity

Independence x Maturity

Established but locked

Vendor independence

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	92	60
Complexity x Impact	Strategic transformers	82	80
Independence x Maturity	Established but locked	18	90

Placement rationale

Pure-play SLED: highest readiness on this map, ERP-class impact, and the deepest local-gov lock-in. AI is sold as governed public-sector features — no FedRAMP claim found on Tyler’s AI page in this edition. MyGov (2026) extends smaller agencies; core Tyler remains multi-year.

Scoring notes

Readiness x capability

Pure-play SLED vendor. Public materials cite ~44K installations / 13K locations. 2026 MyGov acquisition extends permitting/community-development into smaller agencies. AI is sold as governed public-sector features — no FedRAMP claim found on Tyler’s AI page.

Complexity x impact

ERP-class: transforms finance/permitting/public safety modules you already run. MyGov is a faster add for small jurisdictions; core Tyler remains multi-year.

Independence x maturity

Deepest local-gov install base. Proprietary suite; switching costs are the story.

Procurement questions

- Which Tyler suite (finance, permitting, public safety) would AI actually touch, and is it GA in that module?
- Tyler’s public AI page is not treated here as a FedRAMP claim — what authorization, if any, applies to the specific AI feature?
- How does the 2026 MyGov acquisition change scope for smaller agencies versus core Tyler?
- What are switching costs given Tyler’s SLED install base?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

CGI Advantage

GOV ERP

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	74	58
Complexity × Impact	Strategic transformers	84	72
Independence × Maturity	Established but locked	24	76

Placement rationale

Avero places CGI Advantage in “Government-ready leaders” on readiness × capability, “Strategic transformers” on complexity × impact, and “Established but locked” on independence × maturity. Proprietary. Entrenched where Advantage already runs.

Scoring notes

Readiness × capability

Federal/state ERP with a long public-sector bench. AI is integration, not a separate SLED copilot brand.

Complexity × impact

Full ERP replacement energy. High operational transformation, long calendar.

Independence × maturity

Proprietary. Entrenched where Advantage already runs.

Procurement questions

- Is this an AI feature on Advantage you already run, or a full ERP replacement?
- What is the implementation calendar, given AI is integration rather than a separate SLED copilot brand?
- Who owns customizations at the end of the contract?
- What is the data-conversion plan if you leave Advantage?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

ERP/CLOUD

ERP/Cloud

1 product in this edition.

Oracle Cloud Gov

ERP/CLOUD

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	76	74
Complexity x Impact	Strategic transformers	88	80
Independence x Maturity	Established but locked	28	84

Placement rationale

Avero places Oracle Cloud Gov in “Government-ready leaders” on readiness x capability, “Strategic transformers” on complexity x impact, and “Established but locked” on independence x maturity. Oracle ecosystem. Hard to leave once finance is on it.

Scoring notes

Readiness x capability

Sovereign / government cloud with FedRAMP and IL5 paths on Oracle’s public cloud pages. Fusion Cloud public-sector AI agents are marketed on that stack — confirm the agent SKU is inside the authorized boundary before treating it as FedRAMP.

Complexity x impact

Cloud migration plus process redesign. Agents sit on top of Fusion data; the heavy lift is still the ERP.

Independence x maturity

Oracle ecosystem. Hard to leave once finance is on it.

Procurement questions

- Confirm the Fusion public-sector AI agent SKU sits inside the authorized sovereign/government cloud boundary before treating it as FedRAMP.
- Is this an ERP migration, an AI add-on, or both — and which is funded?
- Who owns integrations to the rest of the city’s systems of record?
- What is the realistic unwind from Oracle finance?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

ERP/AI

ERP/AI

1 product in this edition.

SAP (Joule AI)

ERP/AI

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	64	62
Complexity x Impact	Strategic transformers	86	72
Independence x Maturity	Established but locked	30	80

Placement rationale

Avero places SAP (Joule AI) in “Government-ready leaders” on readiness x capability, “Strategic transformers” on complexity x impact, and “Established but locked” on independence x maturity. SAP lock-in. Huge installed base where it exists.

Scoring notes

Readiness x capability

Joule sits on S/4HANA Cloud. Strong enterprise; SLED-specific sales motion still thinner than Tyler/CGI.

Complexity x impact

Massive if you are already SAP. Greenfield SLED SAP+AI is a heavy lift.

Independence x maturity

SAP lock-in. Huge installed base where it exists.

Procurement questions

- Are you already on S/4HANA Cloud, or is this a greenfield SLED SAP program?
- Which Joule features are in the tenant you can actually buy for government?
- What SLED references exist beyond general enterprise SAP?
- How will you staff a multi-year SAP + AI change program?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

HCM/FINANCE

HCM/Finance

1 product in this edition.

Workday AI

HCM/FINANCE

Readiness × Capability

Government readiness

Complexity × Impact

Implementation complexity

Independence × Maturity

Vendor independence

Established but locked

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	74	66
Complexity × Impact	Strategic transformers	76	70
Independence × Maturity	Established but locked	34	72

Placement rationale

Avero places Workday AI in “Government-ready leaders” on readiness × capability, “Strategic transformers” on complexity × impact, and “Established but locked” on independence × maturity. Moderate lock-in. Strong in large-government HCM.

Scoring notes

Readiness × capability

Workday Government / large-state HCM is the usual SLED path. AI features ride the existing tenant — do not treat that as a FedRAMP shortcut without checking the SKU. Workday also ships a Copilot agent for HR/finance in commercial M365; confirm government-cloud availability before buying that pairing.

Complexity × impact

Workforce planning and HR ops. Real only with clean HCM data.

Independence × maturity

Moderate lock-in. Strong in large-government HCM.

Procurement questions

- Confirm government-cloud availability of any Copilot-for-HR pairing before buying that SKU — do not treat the HCM tenant as a FedRAMP shortcut.
- Is HCM data clean enough for workforce-planning AI to be true?
- What is the records treatment of AI-generated HR content?
- How portable are extensions if you leave Workday?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

GOV PLATFORM

Gov Platform

4 products in this edition.

OpenGov

GOV PLATFORM

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	76	58
Complexity x Impact	Strategic transformers	50	60
Independence x Maturity	Open and proven	56	60

Placement rationale

Avero places OpenGov in “Government-ready leaders” on readiness x capability, “Strategic transformers” on complexity x impact, and “Open and proven” on independence x maturity. Cloud-native and more portable than legacy ERP, but the suite is sticky once finance lives there.

Scoring notes

Readiness x capability

April 2026: AI-native Public Service Platform, OG Assist, and AI Review for permitting. Ignatius acquisition (Feb 2026). Cloud-native SLED budgeting/ERP path.

Complexity x impact

Budget, permitting, and HCM on one data foundation if you buy the platform story. AI Review can speed plan check; change management is still local.

Independence x maturity

Cloud-native and more portable than legacy ERP, but the suite is sticky once finance lives there.

Procurement questions

- Are you buying OG Assist / AI Review as modules, or the full AI-native Public Service Platform story?
- How does the Ignatius acquisition (Feb 2026) change the product you are signing?
- Who is accountable when AI Review disagrees with a plan reviewer?
- How sticky is finance once it lives on OpenGov?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Accela

GOV PLATFORM

Readiness × Capability

Government-ready leaders

Government readiness

Complexity × Impact

Strategic transformers

Implementation complexity

Independence × Maturity

Open and proven

Vendor independence

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	76	50
Complexity × Impact	Strategic transformers	54	56
Independence × Maturity	Open and proven	56	58

Placement rationale

Avero places Accela in “Government-ready leaders” on readiness × capability, “Strategic transformers” on complexity × impact, and “Open and proven” on independence × maturity. API-first relative to old on-prem permitting. Still a specialized system of record.

Scoring notes

Readiness × capability

CivicAI is Accela’s 2026 permitting/licensing/inspections AI layer, positioned as auditable civic workflow AI. Long SLED permitting footprint.

Complexity × impact

Citizen-facing cycle time if reviewers trust the assist. Not a citywide platform by itself.

Independence × maturity

API-first relative to old on-prem permitting. Still a specialized system of record.

Procurement questions

- Is CivicAI generally available in the Accela modules you run (permitting, licensing, inspections)?
- What is auditable — model, prompt, reviewer override?
- Does this replace Accela as system of record, or sit on top of it?
- What is data portability versus swapping the permitting stack?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

CentralSquare

GOV PLATFORM

Readiness × Capability

Government-ready leaders

Government readiness

Complexity × Impact

Strategic transformers

Implementation complexity

Independence × Maturity

Established but locked

Vendor independence

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	84	66
Complexity × Impact	Strategic transformers	70	70
Independence × Maturity	Established but locked	32	74

Placement rationale

Avero places CentralSquare in “Government-ready leaders” on readiness × capability, “Strategic transformers” on complexity × impact, and “Established but locked” on independence × maturity. Proprietary public-safety/admin suite. High switching cost.

Scoring notes

Readiness × capability

8K+ agencies. 20 Aug 2026: Centerline AI expanded to public administration as a standalone assistant grounded in agency documents. Blueline adds AI police-report writing. OMNIA/cloud path for many customers.

Complexity × impact

Public safety plus admin. Centerline is an add-on; RMS/CAD replacement is still a heavy lift.

Independence × maturity

Proprietary public-safety/admin suite. High switching cost.

Procurement questions

- Is Centerline AI a standalone assistant add-on, or bundled with RMS/CAD you already own?
- Where does Blueline police-report writing store drafts, and who reviews before they become records?
- Which OMNIA/cloud vehicle and which modules are in this buy?
- What is the switching cost across the public-safety and admin suite?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	70	36
Complexity × Impact	Quick wins	26	54
Independence × Maturity	Flexible but unproven	62	34

Placement rationale

AI plan review / pre-check for local permitting. Official plan-review layer for CivicPlus; also sits beside Accela/Tyler/OpenGov. TXShare cooperative endorsement. No FedRAMP claim used here. Narrow by design — does not replace the permitting system of record, and is easier to unwind than swapping Accela/Tyler.

Scoring notes

Readiness × capability

AI plan review / pre-check for local permitting. Official plan-review layer for CivicPlus; also sits beside Accela/Tyler/OpenGov per vendor materials. TXShare cooperative endorsement. No FedRAMP claim used here.

Complexity × impact

Reviewer cycle time on building plans. Narrow by design; does not replace the permitting system of record.

Independence × maturity

Layer on CivicPlus or another CD stack. Easier to unwind than swapping Accela/Tyler.

Procurement questions

- Official plan-review layer for CivicPlus; also sits beside Accela/Tyler/OpenGov. Which system of record will it attach to?
- TXShare cooperative endorsement — is that usable in your state?
- No FedRAMP claim used here. What is the data flow for building plans (often sensitive)?
- Who is liable when pre-check disagrees with the adopted code? Get unwind terms in the contract — this layer should be easier to leave than swapping Accela/Tyler.

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

GIS/ANALYTICS

GIS/Analytics

1 product in this edition.

Esri

GIS/ANALYTICS

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	90	80
Complexity x Impact	Strategic transformers	80	82
Independence x Maturity	Established but locked	20	92

Placement rationale

Default SLED GIS — government-ready, high impact when spatial is the work, deepest GIS lock-in in government. FedRAMP-authorized ArcGIS Online / enterprise cloud offerings are on Esri’s public compliance pages. Treat AI assistants as features of the authorized GIS, not a separate FedRAMP product unless Esri lists one.

Scoring notes

Readiness x capability

Default SLED GIS. FedRAMP-authorized ArcGIS Online / enterprise cloud offerings are on Esri’s public compliance pages. Esri markets AI assistants and AI/ML on that stack — treat assistants as features of the authorized GIS, not a separate FedRAMP product unless Esri lists one.

Complexity x impact

Transformative when spatial is the work. Assistants help analysts; the platform is still GIS.

Independence x maturity

Deepest GIS lock-in in government. Plan the exit before you extend it.

Procurement questions

- Are AI assistants a feature of FedRAMP-authorized ArcGIS Online / enterprise cloud, or a separate product Esri lists on its own?
- What spatial data will the assistant see, and is that appropriate for the cloud org you run?
- Who can disable assistant features per group without losing core GIS?
- What is the exit plan before you extend GIS lock-in further?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

CITIZEN ENGAGEMENT

Citizen Engagement

6 products in this edition.

Granicus GXA

CITIZEN ENGAGEMENT

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	86	48
Complexity × Impact	Quick wins	30	62
Independence × Maturity	Established but locked	38	76

Placement rationale

Avero places Granicus GXA in “Safe but limited” on readiness × capability, “Quick wins” on complexity × impact, and “Established but locked” on independence × maturity. Gov-specific platform. Established, not easy to unwind.

Scoring notes

Readiness × capability

Purpose-built gov civic experience and AI digital agents (GXA). Long GovTech 100 run; thousands of SLED sites.

Complexity × impact

Direct resident channels if you already run Granicus CMS/meetings. Agents help 311/content; they do not replace the civic suite.

Independence × maturity

Gov-specific platform. Established, not easy to unwind.

Procurement questions

- Are you already on Granicus CMS/meetings, or is GXA a net-new civic suite?
- What can digital agents do in 311/content versus what still needs a human?
- What are the records and public-meeting implications of AI-drafted civic content?
- What is the unwind cost from the civic-experience platform?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Citibot

CITIZEN ENGAGEMENT

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	80	30
Complexity × Impact	Easy adds	14	40
Independence × Maturity	Flexible but unproven	62	40

Placement rationale

Avero places Citibot in “Safe but limited” on readiness × capability, “Easy adds” on complexity × impact, and “Flexible but unproven” on independence × maturity. Lightweight. Newer than the civic-suite incumbents.

Scoring notes

Readiness × capability

Gov-only chatbot, SMS/web, Carahsoft distribution. Easy cooperative buy.

Complexity × impact

311 deflection. Fast to stand up, narrow ceiling.

Independence × maturity

Lightweight. Newer than the civic-suite incumbents.

Procurement questions

- Which cooperative vehicle (Carahsoft or other) are you using?
- What deflection rate is contractual versus marketed, and who owns the conversation data?
- What accessibility and language coverage exists for SMS and web?
- How easily can you replace a lightweight chatbot without stranding history?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Polco AI (Polly)

CITIZEN ENGAGEMENT

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	78	34
Complexity × Impact	Easy adds	20	44
Independence × Maturity	Open and proven	60	50

Placement rationale

Avero places Polco AI (Polly) in “Safe but limited” on readiness × capability, “Easy adds” on complexity × impact, and “Open and proven” on independence × maturity. Relatively interoperable. Niche but proven in local gov.

Scoring notes

Readiness × capability

Local-gov engagement, ICMA-grounded, 500+ gov clients in public materials.

Complexity × impact

Community input, not operations. Quick if survey/engagement is the job.

Independence × maturity

Relatively interoperable. Niche but proven in local gov.

Procurement questions

- Is the job community input or operations? This is not an operations system.
- What ICMA-grounded methodology is in the contract versus marketing?
- Who owns survey microdata, and can residents request deletion?
- How does this interoperate with your existing engagement stack?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

CivicPlus

CITIZEN ENGAGEMENT

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	76	40
Complexity × Impact	Easy adds	26	44
Independence × Maturity	Open and proven	50	52

Placement rationale

Avero places CivicPlus in “Safe but limited” on readiness × capability, “Easy adds” on complexity × impact, and “Open and proven” on independence × maturity. Mid-range lock-in. Cloud suite.

Scoring notes

Readiness × capability

Websites, meetings, civic engagement with AI assist. 4K+ clients.

Complexity × impact

Resident-facing content and meetings. Incremental unless you replace the whole civic stack.

Independence × maturity

Mid-range lock-in. Cloud suite.

Procurement questions

- Which CivicPlus products (web, meetings, engagement) would AI assist, and is it included or a separate SKU?
- Will this replace the civic stack or incrementally assist content?
- What peer references exist in your state among the 4K+ client install base?
- What is lock-in of the cloud suite versus a thinner CMS?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

PublicInput

CITIZEN ENGAGEMENT

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	70	28
Complexity × Impact	Easy adds	16	38
Independence × Maturity	Flexible but unproven	64	34

Placement rationale

Avero places PublicInput in “Safe but limited” on readiness × capability, “Easy adds” on complexity × impact, and “Flexible but unproven” on independence × maturity. Lightweight, newer.

Scoring notes

Readiness × capability

Community engagement analytics. Smaller install than CivicPlus/Granicus.

Complexity × impact

Easy add for outreach teams.

Independence × maturity

Lightweight, newer.

Procurement questions

- What analytics are included versus professional services?
- How does install size compare to CivicPlus/Granicus for peer references you can call?
- What is the public-records treatment of comments and the data-export path?
- What are cancellation and data-deletion terms?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Zencity

CITIZEN ENGAGEMENT

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	72	50
Complexity × Impact	Quick wins	20	54
Independence × Maturity	Open and proven	60	56

Placement rationale

Avero places Zencity in “Government-ready leaders” on readiness × capability, “Quick wins” on complexity × impact, and “Open and proven” on independence × maturity. SaaS; data export is the question to put in the contract.

Scoring notes

Readiness × capability

Community trust / sentiment. Commonplace acquisition. Hundreds of agencies in vendor materials.

Complexity × impact

Leadership dashboard value; does not run the city.

Independence × maturity

SaaS; data export is the question to put in the contract.

Procurement questions

- What changed after the Commonplace acquisition in the product you are buying?
- Can you export sentiment data, and is that written into the contract?
- How will you stop leadership from treating a dashboard as a resident census?
- Who is allowed to query the tool, and is that logged?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

GOV-NATIVE AI

Gov-native AI

4 products in this edition.

Madison AI

GOV-NATIVE AI

Readiness × Capability

Government-ready leaders

Government readiness

Complexity × Impact

Strategic transformers

Implementation complexity

Independence × Maturity

Open and proven

Vendor independence

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	52	52
Complexity × Impact	Strategic transformers	50	54
Independence × Maturity	Open and proven	58	50

Placement rationale

Avero places Madison AI in “Government-ready leaders” on readiness × capability, “Strategic transformers” on complexity × impact, and “Open and proven” on independence × maturity. Lower lock-in than ERP. Emerging.

Scoring notes

Readiness × capability

Role-specific assistants. Washoe County and GovAI Coalition references. Still building cooperative depth.

Complexity × impact

Staff copilots. Moderate setup.

Independence × maturity

Lower lock-in than ERP. Emerging.

Procurement questions

- Which role-specific assistants are in production at Washoe or other named references — can you speak to them?
- What cooperative vehicles exist today?
- Where do prompts and outputs live, and who can export them?
- How do you avoid a second shadow-IT copilot next to M365?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Darwin AI

GOV-NATIVE AI

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	74	44
Complexity × Impact	Quick wins	32	50
Independence × Maturity	Flexible but unproven	70	38

Placement rationale

Q1 readiness is up this edition because of the April 2026 Carahsoft announcement (NASPO, TIPS, OMNIA) — that is a vehicle story, still not a FedRAMP claim. Impact is oversight and inventory, not resident services. Positioned as model-agnostic and still early in SLED.

Scoring notes

Readiness × capability

AI governance/monitoring. GovTech 100 new 2026. Apr 2026 Carahsoft announcement adds NASPO, TIPS, and OMNIA vehicles — Q1 readiness raised this edition. Still not a FedRAMP claim.

Complexity × impact

Oversight layer. Value is policy and inventory, not resident services.

Independence × maturity

Positioned as model-agnostic. Still early in SLED.

Procurement questions

- Carahsoft + NASPO/TIPS/OMNIA (Apr 2026) is a vehicle story — not a FedRAMP claim. What authorization, if any, applies?
- Is this governance and inventory of models, or resident-facing AI?
- Who maintains the AI inventory after go-live?
- Model-agnostic claims — can you swap monitored models without relicensing?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Polimorphic

GOV-NATIVE AI

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	58	54
Complexity x Impact	Strategic transformers	52	58
Independence x Maturity	Open and proven	54	54

Placement rationale

Avero places Polimorphic in "Government-ready leaders" on readiness x capability, "Strategic transformers" on complexity x impact, and "Open and proven" on independence x maturity. Gov-OS ambition = moderate lock-in if it becomes the front door.

Scoring notes

Readiness x capability

Front desk, VoiceAI, CRM. Vendor cites 200+ departments / 36M residents.

Complexity x impact

Resident intake automation. Moderate integration.

Independence x maturity

Gov-OS ambition = moderate lock-in if it becomes the front door.

Procurement questions

- Vendor cites 200+ departments / 36M residents — which peers match your size, and can you call them?
- If VoiceAI becomes the front door, what is the CRM export and call-recording records schedule?
- How does this integrate with existing 311/CRM?
- What is lock-in if it becomes the intake layer for the organization?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Just Appraised

GOV-NATIVE AI

Lens	Placement	X	Y
Readiness × Capability	Emerging bets	34	28
Complexity × Impact	Easy adds	30	46
Independence × Maturity	Flexible but unproven	66	26

Placement rationale

Avero places Just Appraised in “Emerging bets” on readiness × capability, “Easy adds” on complexity × impact, and “Flexible but unproven” on independence × maturity. Lightweight workflow. Early.

Scoring notes

Readiness × capability

AI-assisted property-tax workflows for county assessors. GovTech 100 new 2026. Thin national vehicle story.

Complexity × impact

Assessor cycle time. Narrow by design.

Independence × maturity

Lightweight workflow. Early.

Procurement questions

- Which assessor workflows are in scope (deeds, appeals, valuations)?
- Thin national vehicle story — how are you buying it?
- Who is liable for AI-assisted valuation recommendations?
- Where do parcel and owner data reside, and who can export them?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

PUBLIC SAFETY AI

Public Safety AI

6 products in this edition.

Hayden AI

PUBLIC SAFETY AI

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	72	42
Complexity × Impact	Quick wins	42	62
Independence × Maturity	Risky bets	48	42

Placement rationale

Avero places Hayden AI in “Safe but limited” on readiness × capability, “Quick wins” on complexity × impact, and “Risky bets” on independence × maturity. Proprietary cameras. Switching means trucks and mounts, not just a SaaS cancel.

Scoring notes

Readiness × capability

Vision AI for transit enforcement. Hardware plus software; transit-authority references.

Complexity × impact

Measurable bus-lane/safety use cases. Hardware deployment.

Independence × maturity

Proprietary cameras. Switching means trucks and mounts, not just a SaaS cancel.

Procurement questions

- Hardware plus software — who owns cameras at end of term, and what is the take-down cost?
- Which transit-authority references match your operating environment?
- What is the evidence chain for enforcement actions?
- What are privacy, retention, and sharing rules for video?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Mark43

PUBLIC SAFETY AI

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	74	58
Complexity x Impact	Strategic transformers	74	76
Independence x Maturity	Established but locked	44	62

Placement rationale

Avero places Mark43 in "Government-ready leaders" on readiness x capability, "Strategic transformers" on complexity x impact, and "Established but locked" on independence x maturity. Specialized cloud RMS. Growing but sticky.

Scoring notes

Readiness x capability

Cloud RMS/CAD. 200+ agencies in public materials. Competes with CentralSquare/Tyler public safety.

Complexity x impact

Full RMS replacement is a transformation, not a copilot.

Independence x maturity

Specialized cloud RMS. Growing but sticky.

Procurement questions

- This is RMS/CAD replacement energy, not a copilot. Is the agency resourced for that?
- Which of the 200+ agencies are similar CAD/RMS replacements in your state?
- What is the CJIS and records migration path from the incumbent (CentralSquare/Tyler)?
- What is data export if you later leave the cloud RMS?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Forcemetrics

PUBLIC SAFETY AI

Lens	Placement	X	Y
Readiness × Capability	Emerging bets	30	32
Complexity × Impact	Quick wins	36	52
Independence × Maturity	Flexible but unproven	56	30

Placement rationale

Avero places Forcemetrics in “Emerging bets” on readiness × capability, “Quick wins” on complexity × impact, and “Flexible but unproven” on independence × maturity. Emerging. Lower lock-in than RMS.

Scoring notes

Readiness × capability

Precision-policing analytics. GovTech 100. Fewer national vehicles documented than Axon/Flock.

Complexity × impact

Analytics overlay. Impact tracks data quality and policy.

Independence × maturity

Emerging. Lower lock-in than RMS.

Procurement questions

- Fewer national vehicles than Axon/Flock — what is the procurement path?
- What source systems feed the analytics, and who owns data quality?
- What policy constraints apply to precision-policing analytics in your jurisdiction?
- Can you leave without losing historical analysis?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Peregrine
PUBLIC SAFETY AI

Lens	Placement	X	Y
Readiness × Capability	Emerging bets	36	40
Complexity × Impact	Quick wins	48	60
Independence × Maturity	Flexible but unproven	62	36

Placement rationale

Avero places Peregrine in “Emerging bets” on readiness × capability, “Quick wins” on complexity × impact, and “Flexible but unproven” on independence × maturity. Integration-focused. Newer GovTech 100 name.

Scoring notes

Readiness × capability

Public-safety data integration. Large 2026 private raise in prior coverage. Still a specialized buy.

Complexity × impact

Cross-system intelligence if agencies will share. Integration project, not a license key.

Independence × maturity

Integration-focused. Newer GovTech 100 name.

Procurement questions

- Which agencies will actually share data, and is that in writing before you buy?
- This is an integration project. Who is the integrator of record?
- What live SLED references exist at your scale?
- How portable is the integration layer if you cancel?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Axon Draft One

PUBLIC SAFETY AI · NEW THIS EDITION

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	82	44
Complexity × Impact	Quick wins	28	64
Independence × Maturity	Established but locked	20	80

Placement rationale

New this edition. Easiest where Axon Evidence/BWC is already on the belt; 2026 local adoptions are named in the live notes. No FedRAMP claim is used here. Impact is officer time on narratives with required human review. Independence is Axon ecosystem gravity.

Scoring notes

Readiness × capability

Sold into existing Axon Evidence/BWC estates. 2026 local adoptions (e.g. Pittsburg CA, Prescott AZ, Kenosha WI, Alamosa CO). No FedRAMP claim used here. Easiest where Axon is already on the belt.

Complexity × impact

Officer time back on report narratives; human review required. Does not replace RMS judgment or policy.

Independence × maturity

Axon ecosystem gravity (BWC, Evidence, Records, Taser). Hard to unbundle once reports depend on it.

Procurement questions

- Is Axon Evidence/BWC already on the belt, or is this a bundled hardware + software conversion?
- 2026 local adoptions (Pittsburg CA, Prescott AZ, Kenosha WI, Alamosa CO) — can you speak with a peer about review policy?
- No FedRAMP claim is used in this edition — what security review does your agency require?
- Who is the human reviewer of record, and can narratives ship without that review? What is the unbundle cost if reports depend on Draft One but you later leave Evidence?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

Flock Safety

PUBLIC SAFETY AI · NEW THIS EDITION

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	86	40
Complexity × Impact	Quick wins	26	58
Independence × Maturity	Established but locked	16	84

Placement rationale

Widely bought via OMNIA/Region 4 ESC cooperative R250203 — a cooperative buy is not FedRAMP. Impact is investigative speed where ALPR is lawful; community-trust cost can erase the gain (Madison-area non-renewals, 2026). Network effects and camera contracts make this established-but-locked; several agencies have found early exit expensive.

Scoring notes

Readiness × capability

ALPR/cameras widely bought by cities via OMNIA/Region 4 ESC cooperative R250203 (public 2026 council packets). Do not treat cooperative buy as FedRAMP. Privacy and data-sharing fights are part of the SLED story (Madison-area non-renewals, 2026).

Complexity × impact

Investigative speed where ALPR is lawful and used. Community trust cost can erase the operational gain.

Independence × maturity

Network effects and multi-year camera contracts. Several agencies have found early exit expensive.

Procurement questions

- Cooperative buy via OMNIA/Region 4 ESC R250203 is not FedRAMP. What privacy and data-sharing ordinance applies locally?
- What are retention, hotspot sharing, and audit of who queried plates?
- What is early-exit and camera-removal cost — several agencies have found exit expensive.
- Community-trust cost: Madison-area non-renewals in 2026 are part of the SLED story. How will you handle public records and challenge?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

HHS AI

HHS AI

1 product in this edition.

Cardinality.ai

HHS AI

Readiness × Capability

Emerging bets

Government readiness

Complexity × Impact

Strategic transformers

Implementation complexity

Independence × Maturity

Flexible but unproven

Vendor independence

Lens	Placement	X	Y
Readiness × Capability	Emerging bets	38	42
Complexity × Impact	Strategic transformers	56	66
Independence × Maturity	Flexible but unproven	56	44

Placement rationale

Avero places Cardinality.ai in “Emerging bets” on readiness × capability, “Strategic transformers” on complexity × impact, and “Flexible but unproven” on independence × maturity. AWS-based. Moderate portability.

Scoring notes

Readiness × capability

HHS case-management AI. AWS Gov partner messaging. Not a general SLED copilot.

Complexity × impact

Case outcomes if data and policy allow. Integration into eligibility systems is the work.

Independence × maturity

AWS-based. Moderate portability.

Procurement questions

- Which HHS eligibility or case systems must it integrate with, and who pays for that work?
- AWS Gov partner messaging is not a blanket authorization — what is the actual ATO path?
- How are caseworker overrides logged?
- Which outcomes versus speed metrics are contractual?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

PROCUREMENT AI

Procurement AI

1 product in this edition.

Civic Marketplace

PROCUREMENT AI · NEW THIS EDITION

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	74	36
Complexity × Impact	Easy adds	16	48
Independence × Maturity	Flexible but unproven	72	40

Placement rationale

Avero places Civic Marketplace in “Safe but limited” on readiness × capability, “Easy adds” on complexity × impact, and “Flexible but unproven” on independence × maturity. Open connectors by design. Still a young category; do not confuse with a full e-procurement suite.

Scoring notes

Readiness × capability

Free for SLED entities. NIGP Business Council member. 24 Aug 2026: MCP connectors into Claude, ChatGPT, and Copilot announced at NIGP Forum.

Complexity × impact

Finds cooperative contracts and suppliers faster. Does not run finance or inventory.

Independence × maturity

Open connectors by design. Still a young category; do not confuse with a full e-procurement suite.

Procurement questions

- Free for SLED — what is the data use of your searches and staff accounts?
- MCP connectors into Claude, ChatGPT, and Copilot (24 Aug 2026) — which models will staff use, and is that allowed on your network?
- This is not a full e-procurement suite. What still lives in finance and inventory?
- NIGP Business Council membership is not a substitute for a local legal review of cooperative use.

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

HIGHER-ED AI · NEW THIS EDITION

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	86	72
Complexity x Impact	Strategic transformers	82	80
Independence x Maturity	Established but locked	20	88

Placement rationale

Dominant campus SIS vendor — buy is usually an existing Ellucian relationship, not a net-new SLED RFP. FERPA-oriented responsible-AI pages; no FedRAMP claim used here. Impact is student-lifecycle transformation if you actually move SIS. Banner/Colleague lock-in is the higher-ed equivalent of Tyler in cities.

Scoring notes

Readiness x capability

Ellucian Student launched as an AI-native SIS+HCM+Finance platform for higher ed (2026 product line). Dominant campus SIS vendor; buy is usually an existing Ellucian relationship, not a net-new SLED RFP. FERPA-oriented responsible-AI pages; no FedRAMP claim used here.

Complexity x impact

Student-lifecycle transformation if you actually move SIS. That is a multi-year campus program.

Independence x maturity

Banner/Colleague/Ellucian platform lock-in is the higher-ed equivalent of Tyler in cities.

Procurement questions

- Are you an existing Banner/Colleague customer, or is this a net-new SIS RFP?
- Ellucian Student as an AI-native SIS+HCM+Finance line is a multi-year campus program — what is actually in this year’s scope?
- FERPA-oriented responsible-AI pages; no FedRAMP claim used here. What is the campus data classification for the AI features?
- Lock-in: this is the higher-ed equivalent of Tyler in cities. What is the exit?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

RPA/AUTOMATION

RPA/Automation

1 product in this edition.

UiPath Automation Cloud Public Sector

RPA/AUTOMATION · NEW THIS EDITION

Lens	Placement	X	Y
Readiness × Capability	Government-ready leaders	80	64
Complexity × Impact	Strategic transformers	60	64
Independence × Maturity	Established but locked	40	72

Placement rationale

FedRAMP Certified Moderate (Class C) as of 20 Mar 2024 (FR2132958724). April 2026 public-sector notes add GenAI Activities via Integration Service; some Insights features remain outside the authorization until review completes. Impact is process redesign, not a chatbot. Platform lock-in once bots live here.

Scoring notes

Readiness × capability

FedRAMP Certified Moderate (Class C) as of 20 Mar 2024 (FR2132958724). UiPath docs: public-sector SaaS with FIPS 140-2, U.S.-person ops. April 2026 public-sector release notes add GenAI Activities via Integration Service. Some Insights features remain outside the authorization until review completes.

Complexity × impact

Back-office automation at scale. Impact is process redesign, not a chatbot. GenAI activities sit on existing bots.

Independence × maturity

Platform lock-in once bots and orchestrations live here. Mature RPA market with alternatives.

Procurement questions

- FedRAMP Certified Moderate (Class C) as of 20 Mar 2024 (FR2132958724). Which Insights or GenAI Activities remain outside the authorization until review completes?
- April 2026 public-sector release notes add GenAI Activities via Integration Service — are those in your authorized tenant?
- FIPS 140-2 and U.S.-person ops are documented — does that match your policy?
- Bot and orchestration lock-in — what is the rewrite plan?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

LOW-CODE

Low-code

1 product in this edition.

Appian Government Cloud

LOW-CODE · NEW THIS EDITION

Lens	Placement	X	Y
Readiness x Capability	Government-ready leaders	78	76
Complexity x Impact	Strategic transformers	74	74
Independence x Maturity	Established but locked	30	70

Placement rationale

Appian Government Cloud — High: FedRAMP Certified Class D (High) as of 3 Apr 2025 (FR2318051429). AI skills inherit the GovCloud boundary; model pick is constrained on GovCloud inference profiles. High ceiling if you build on Appian; stronger federal than small-city SLED. Platform lock-in.

Scoring notes

Readiness x capability

Appian Government Cloud — High: FedRAMP Certified Class D (High) as of 3 Apr 2025 (FR2318051429). Appian also states a 3-year DoD IL5 PA. AI skills inherit the GovCloud boundary; model pick is constrained on GovCloud inference profiles.

Complexity x impact

Low-code process + AI on casework. High ceiling if you build on Appian; not a point copilot.

Independence x maturity

Appian platform lock-in. Stronger federal than small-city SLED.

Procurement questions

- Appian Government Cloud — High: FedRAMP Certified Class D (High) as of 3 Apr 2025 (FR2318051429). Confirm the AI skills you want inherit that GovCloud boundary.
- Model pick is constrained on GovCloud inference profiles — which models are actually available?
- A 3-year DoD IL5 PA is federal/DoD — not automatically a city ATO. What is your path?
- Who owns the process apps if you leave Appian?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

COLLABORATION

Collaboration

Zoom AI Companion

COLLABORATION · NEW THIS EDITION

Readiness × Capability

Safe but limited

Government readiness

Complexity × Impact

Easy adds

Implementation complexity

Independence × Maturity

Established but locked

Vendor independence

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	84	38
Complexity × Impact	Easy adds	16	40
Independence × Maturity	Established but locked	36	80

Placement rationale

Verified gov path: FedRAMP JAB Moderate for AI Companion on Zoom for Government (16 Sep 2024). Commercial AI Companion is a different stack — buy the Gov SKU. Easy add where Zoom Gov is already the meeting system; narrow mission impact. Mature meetings ecosystem; AI is not a system of record.

Scoring notes

Readiness × capability

Verified gov path: Zoom announced FedRAMP JAB Moderate authorization for AI Companion on Zoom for Government (16 Sep 2024). Zoom for Government also cites FedRAMP Moderate, DoD IL4, and StateRAMP on the platform. For paid Zoom Gov accounts, including state/local. Commercial AI Companion is a different stack — buy the Gov SKU.

Complexity × impact

Meeting summaries, chat draft, whiteboard assist. Easy add where Zoom Gov is already the meeting system. Narrow mission impact.

Independence × maturity

Zoom Gov ecosystem. Mature in SLED meetings; AI is an add-on, not a system of record.

Procurement questions

- Buy the Zoom for Government SKU. Commercial AI Companion is a different stack. Which one is on the quote?
- FedRAMP JAB Moderate for AI Companion on Zoom for Government (16 Sep 2024). Confirm the AI Companion feature is in the authorized Zoom Gov account you own.
- Where are meeting summaries stored, and are they public records?
- This is an add-on, not a system of record. Who can disable it per meeting?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

RECORDS/ECM

Records/ECM

1 product in this edition.

Laserfiche AI

RECORDS/ECM · NEW THIS EDITION

Readiness × Capability

Safe but limited

Government readiness

Complexity × Impact

Easy adds

Implementation complexity

Independence × Maturity

Established but locked

Vendor independence

Lens	Placement	X	Y
Readiness × Capability	Safe but limited	62	42
Complexity × Impact	Easy adds	40	48
Independence × Maturity	Established but locked	28	72

Placement rationale

Conditional add: deep SLED records/ECM install. Laserfiche AI uses OpenAI models per Laserfiche trust pages. Enterprise Security (6 Aug 2026) is on the GovRAMP Progressing list — not GovRAMP Ready/Authorized as of this edition. Do not treat progressing as authorized. AI rides existing repository lock-in.

Scoring notes

Readiness × capability

Conditional add: deep SLED records/ECM install. Laserfiche AI (including AI Agents, Apr 2026) uses OpenAI models per Laserfiche trust pages. Enterprise Security (6 Aug 2026) is on the GovRAMP Progressing list — not GovRAMP Ready/Authorized as of this edition. Do not treat progressing as authorized.

Complexity × impact

Records search, extraction, and governed automation. Incremental unless records are the bottleneck.

Independence × maturity

Repository lock-in is the ECM story. AI rides the existing Laserfiche estate.

Procurement questions

- Laserfiche AI uses OpenAI models per Laserfiche trust pages. Where does that inference run, and is it acceptable for your records?
- Enterprise Security (6 Aug 2026) is on the GovRAMP Progressing list — not GovRAMP Ready/Authorized as of this edition. Do not treat progressing as authorized.
- Which AI Agents (Apr 2026) features are in your SKU?
- Repository lock-in: AI rides the existing Laserfiche estate. What is the export plan?

Scores are 0–100 Avero placements on each axis, not vendor grades. Verify every compliance claim on the vendor’s current public page before you buy.

HOW WE SCORE ENGAGEMENTS

Caliber — Avero methodology, not a vendor product

Buyer honesty

Beta. Not sold or licensed. There is no SKU and no cooperative contract. Caliber is the buyer-side advisory rail Avero uses to run discovery, requirements, scorecards, and implementation health. Agencies get the benefit by engaging Avero; work product belongs to the agency. It is not plotted on the product matrix so it cannot be mistaken for a paid placement.

Earlier Navigator editions risked looking as if Caliber were a 32nd (or 37th) vendor dot. This edition removes that ambiguity. On the live site, Caliber is a gold methodology rail above the scatter, with a link to averocaliber.averoadvisors.com. This PDF keeps the same rule: Caliber is how Avero works, not what Avero is selling as software.

What Caliber is for

Government AI failures are usually not model failures. They are discovery, requirements, procurement, data, and change-management failures. Caliber is the internal method Avero uses so those steps are explicit: what “done” looks like, who owns the record, which vehicle you can actually use, and whether implementation health is drifting. It is a scoring rail for engagements — not a chatbot, not an ERP, and not a listing you can piggyback.

What Caliber is not

- Not a vendor product on this map, and not competing with the 43.
- Not generally available software you can license from a cooperative.
- Not a substitute for your authorizing official, counsel, or records officer.
- Not a paid placement. Avero did not take vendor money to put anything on this map.

If a salesperson tells you Caliber is “on the Navigator as a leading platform,” they are misreading the map. Send them to the methodology rail and to this page.

START AT ZERO

Before you buy any of these tools

Have you completed **Phase Zero**? Data, policy, procurement vehicles, and an executive sponsor beat another pilot. The playbook is in *Start at Zero* (startatzero.averoadvisors.com). This Navigator tells you where products sit; Phase Zero tells you whether you should be shopping yet.

A short sequence

1. Name the job to be done in citizen or staff outcomes, not in model names.
2. Inventory data classification, records schedules, and the actual vehicle you can use.
3. Place candidate products on these three lenses — then run the questions in this PDF.
4. Require human review, logging, and an exit clause before go-live, especially on public safety, HHS, and ERP.
5. Fund change management. Copilots fail quietly when nobody changes how work is done.

Keep going on the buyer's side: Start at Zero on Substack (avavero.substack.com) and the book at startatzero.averoadvisors.com.

Notes and limits

This is independent analysis by Avero Advisors as of September 2026. It is not legal, procurement, or compliance advice and is not affiliated with any vendor listed. Product names are the vendors' marks. Positions will move as public authorizations, vehicles, and SLED references change — check the live map and the vendor's current page.
